

**Amendments to the Specification**

Please replace paragraph 0024 on page 5 with the following paragraph:

- 5 [0024] Subsequently, the recirculating heating fluid 34 flows from the  
outlet 4 and is recycled by being passed through a third passage [[8]] 9 and through the  
recirculating valve 8 [[9]]. From the recirculating valve [[9]] 8 the recirculating heating  
fluid 34 may be carried back through the return passage 18 to the heating means 12,  
where the heating fluid may be subjected to additional heating to bring it to the  
10 temperature of freshly-heated heating fluid 33. Alternatively, the heating fluid may be  
directed by the recirculating valve 8 into the bypass passage 22 to flow to the first valve  
16.
